

ACRONIS® BACKUP ADVANCED

FOR EXCHANGE

BEST BACKUP FOR MICROSOFT® EXCHANGE SERVER

Agent for Microsoft Exchange Server is the best product for Microsoft Exchange Server deployments. Backup and recovery of Microsoft Exchange databases and mailboxes has never been easier.

Benefits:

- Flexibility
- Cluster support
- Express Full Backup
- Easy search

WHY USE ACRONIS BACKUP ADVANCED FOR EXCHANGE?

Flexibility

Designed with flexibility in mind, Acronis Backup Advanced for Exchange Server provides more than just disaster recovery. It enables you to retrieve data quickly, in the right format, and without disturbing the production server. This makes it easy to perform email-related tasks, such as extracting mailbox content to PST for audit or litigation search, data migration, troubleshooting, and more.

Best-in-Class Cluster Support

Acronis Backup Advanced for Exchange makes cluster protection easy and fully automated. Once configured, the database stays protected after cluster failovers, or even when the database is relocated to a different server. Exchange cluster support goes beyond the ability to protect database replicas. It is represented as one server in the management interface, giving you the ability to easily create multi-server protection plans. Once created, the protection plan follows the database wherever it is located within the cluster.

Express Full Backup

Express Full Backup shortens the backup window, shrinks storage space requirements, and tracks changes over Exchange databases, immediately reporting areas which have changed. Only these areas are backed up, making the entire backup process faster. It also eliminates duplicated data between backups for more efficient use of storage space.

Easy Search

Cataloguing feature automatically indexes the protected Exchange Server data, so you can easily search databases, mailboxes and individual emails across multiple backups and locations.

KEY FEATURES

- **Advanced Product Suite** provides both disaster recovery and data protection in one solution
- **Centralized management of backup and recovery tasks** from a single management console
- **Integration with other Acronis Backup Advanced products** to support physical and virtual environments
- **Ability to restore entire databases and mailboxes**, or a single email
- **Full cluster support**, including Exchange 2010 Database Availability Group
- **Express Full Backup to quickly backup** only the data modified since the last backup
